**WARNING**
To insure proper installation, we recommend having a professional shop drill and tap for the probe. The probe needs a 1/8 NPT tap.

The probe is very sensitive. Please make sure the probe has enough clearance going into the manifold. If the probe is screwed in and hits the other side of the manifold it will cause the tip to snap or bend.

The White wire connects to the pink wire on the probe.
The black wire connects to the blue wire on the probe.
